

# China's latest energy storage policy

In 2023, China invested more in clean energy technologies than the cumulative total of the other top 10 investing countries. The country has ...

On May 8th, the Sichuan Provincial Department of Economy and Information Technology and six other departments jointly issued the "Implementation Plan for Promoting ...

On Feb. 10, 2025, China's Ministry of Industry and Information Technology and other seven central government departments jointly announced an action plan for sound development of ...

5 #0183; China plans to more than double its energy storage capacity in the next two years to further accelerate the deployment of renewables.

ESS policies have been proposed in some countries to support the renewable energy integration and grid stability. These policies are mostly concentrated around battery ...

Central to this success is China's highly coordinated industrial and energy policy, which aligns government priorities, financial incentives and market mechanisms to stimulate domestic ...

China just dropped a policy bombshell that's shaking up the battery storage world. The Eight-Department Action Plan for High-Quality Development of New Energy Storage Manufacturing, ...

5 #0183; China aims to install more than 100 GW of new energy storage - primarily battery storage, excluding pumped hydro - by 2027, according to a new action plan presented by ...

We firmly believe that China will become the world's largest energy storage market. On this huge and diverse fertile soil, the energy ...

In June 2023, China achieved a significant milestone in its transition to clean energy. For the first time, its total installed non-fossil fuel ...

Get the latest updates on battery tech, grid-scale storage & green energy - with trusted news, trends & expert commentary

China new energy storage capacity more than double by 2030 China new energy storage capacity at 73.76 million kW/168 million kWh by the ...

A BESS project in China deployed by Hyperstrong, the largest system integrator in the domestic market.

# China's latest energy storage policy

Image: Hyperstrong. China has reached well over 70GW of installed ...

There are several key energy technology trends dominating 2025. Security, costs and jobs; decarbonization; China; India; and AI all need to be carefully monitored. The World ...

Currently, the domestic energy storage industry in China is rapidly moving towards commercialization, with several local governments ...

Since February 2025, China has rolled out game-changing regulations that'll make your head spin faster than a flywheel system. Let's break down the key updates you ...

China has unveiled plans to boost its energy storage sector as it strives to shore up its energy security and cope with a surge in power demand from emerging industries such ...

China accounted for almost all of Asia's new hydropower capacity in 2024 as it bets on pumped storage to cope with a changing climate.

With Document 136 abolishing mandatory energy storage requirements and Document 394 pushing for comprehensive electricity spot market coverage, this policy combo ...

14 &#0183; The policy and regulatory roadmap is aimed at pushing China's installed base of large-scale energy storage - primarily lithium-ion battery energy storage systems (BESS) - to ...

In a major policy shift towards electricity market liberalization, China has introduced contract for difference (CfD) auctions for renewable ...

2 &#0183; China had about 95 GW of new energy storage capacity installed as of June, according to government data. Hitting the new target would mean nearly a 90% increase in less than two ...

In China, generation-side and grid-side energy storage dominate, making up 97% of newly deployed energy storage capacity in 2023. ...

2 &#0183; New plan calls for expansion of energy-storage applications, including more projects in desert areas and at retired coal-fired power plant sites.

As of June 2025, the China Energy Storage Alliance (CNESA) reports that China has amassed approximately 164 GW of total installed energy storage capacity. This ...

China's National Energy Administration (NEA) has released the China New Energy Storage Development Report 2025, marking the first official and comprehensive ...

# China's latest energy storage policy

The Role of Policy in Energy Storage Development China's energy storage sector is heavily influenced by government policies aimed at promoting renewable energy and ...

Moreover, it addresses the recent change in the direction of the energy-storage policy for the State Grid and China Southern Power Grid and analyzes the primary problems existing in ...

China Policy Experts: What to expect from China on energy and climate action in 2025? Last year was significant for energy and climate developments in China. Carbon dioxide ...

The latest energy storage policy issued by the National Energy Administration indicates that an additional 100 gigawatts of energy storage capacity, equivalent to 300 gigawatt-hours, will be ...

5 &#0183; China plans to more than double its battery storage capacity by 2027 with a new \$35.1 billion investment to support its growing solar and wind power ...

1 &#0183; China has set a target to install over 180 GW of energy storage capacity by 2027, up from 95 GW as of June this year. The capacity addition will involve an investment of approximately ...

5 &#0183; The move is part of China's broader push toward a green, low-carbon energy transition as well as high-quality economic and social development. It builds on significant growth in the ...
